Complete Line of New Arms Available October 3rd

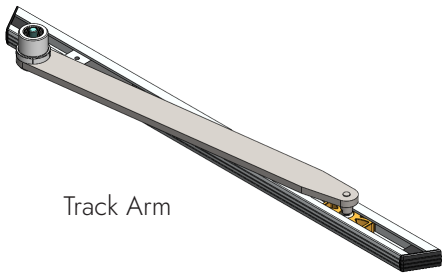

In August we proudly introduced our new & improved standard arm assembly for the Record 6100, 8100 and SimpleSwing product lines. We are pleased to launch the remaining arms to complete the offering. Starting October 3rd, all swing operators shipped from the Record facility will be supplied with the new arm assemblies.

In addition to the updated install manuals, we have a new Arm Ordering Guide and parts list available for use.

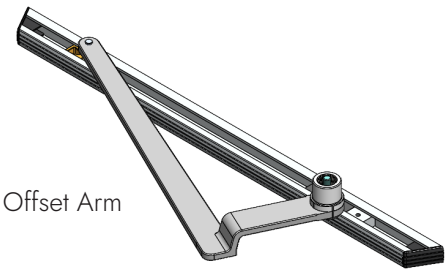

If you have any questions feel free to reach out to your Customer Service Representative or Sales Operations Manager, Jennifer Griffin at Jennifer.Griffin@recorddoors.com.

Standard Arm

Track Arm

Offset Arm

Advantages to the new arm system:

- All steel components as opposed to aluminum.
- Powder coated grey color to better match common door hardware and provide scratch resistance.
- Reveals up to 12" standard.
- Extension available for reveals up to 16" (will not need to field cut to achieve 13"- 16").
- Door portion retrofits exactly with former offering. No need to reprep the door for replacement arm conversion (same bolt hole pattern).
- Testing shows adaptor is more rigid and durable than original (will no longer be a weak link to the units and should extend life expectancy).
- Adaptor now integrates a 360 deg tooth engagement instead of a two point. This provides a stronger assembly with minimal failures in abusive conditions.
- 20, 35, 50 and 80mm height adaptors included in the offering.
- Dark bronze and black arms will be in inventory at all times, and will match nicely while limiting the current issue with chipping paint.
- No cutting in the field when extension adaptor is included (in progress to add adaptor).
- No increased cost.
